ABOUT BROUWERIJ TROOST

Brouwerij Troost might well be the most optimistic brewery in the Netherlands. In 2013, we decided that we could easily do without traditional big brewers, and started making our own beer. Here we are, five years later, making award-winning beers, crisp new soda's, and even gin and 'jenever', the Dutch predecessor of gin, on monumental places in the middle of Amsterdam. Smart and efficient? Not really, but that's not why we do it. Life is too short to be serious all the time, so why not have a little fun? At Brouwerij Troost we try to be as sustainable as possible, create wonderful products, and make you happy while we're at it. Because remember:

Every cloud has a golden lining!

Read our story on www.brouwerijtroost.nl/about

DISTILLING

Last year we bought a still and wooden barrels. These barrels are filled with barleywine or spirits from our own distillery. Some of these barrels have been used before, giving us some extra special aromas. To create unique flavours, it's always our beers that form the base. We'll keep on experimenting to develop rich and flavourful gins, bourbons and genevers.

GUIDED TOURS

Curious about our brewery? You're welcome for a guided tour every Saturday in Brouwerij Troost Westergas at 4pm! For €6,- you get a 30-minute tour and receive a bottle of beer to take home. Private tour? Send an email to: westergas@brouwerijtroost.nl

CONTRACT BREWING

At Brouwerij Troost Westergas we invite other brewers to brew their own beers using our equipment (so-called contract brewing). This way we can enrich the city with an even larger variety of beers!

SUSTAINABILITY WILL SUSTAIN US

We use renewable energy, recycle steam from the cooling process, and fuel our transport with biogas. New energy is created from our organic waste at Westergasterrein by our friends from The Waste Transformers, and sold by VandeBron. The kegs we use are made of circular material and are recycled by the original manufacturer, KeyKeg in North Holland. We collect all empty kegs, they pick them up and transform them into new ones, and send them back to us. It's like one big 'recycle-ception' out here.
